Network Connection Problems

1. Slow or Unstable Internet

- Check that your network is on the **5GHz** band for better speed and reliability.
- Avoid placing the network adapter near walls or sources of magnetic interference.
- Try using a different USB port, especially one further from interference sources.

2. Adjust Router Settings

- Access your router's settings by entering 192.168.1.1 or 192.168.0.1 into your browser.
- In the router's admin page, adjust the channel and bandwidth settings to reduce interference. Choose less congested channels if possible.
- If the above troubleshooting steps don't resolve the issue, please contact our technical support for further assistance.
